

Optimas®

Paving Specialist

Joint filling device

Only a completely filled joint transfers forces from stone to stone, prevents the stones from displacing and preserves the elasticity of the paving layer.

In order to keep the paving surface at its best over the long term, it is imperative that the paving joints have been completely filled with joint filler. The Optimas paving joint filler "Mini" is ideal for medium to small surfaces. Its two overlapping brush units perform a rotating motion which sweeps the material evenly both into the longitudinal as well as in the lateral joints.

Depending on the joint filler being used it is often the case that optimum filling results are achieved by also supplying water, as the water leads to the joint filler mixture filling the joints more uniformly.

Motor:	Honda GXV160 H2 (4,0 kw at 3600 rpm)
Fuel:	unleaded
Working width:	107 cm
Weight:	68 kg
Water supply:	optional
SonstigesTransport position
